

Intelligent alarm and monitoring platform, behaves similar to a monitoring station but utilises cloud automation to improve efficiency, reliability and reduce costs

- No software needed! Just your own internet enabled device
- No contracts, pay as you go service
- Automated solution ideal for any security professional
- Low cost and easy to use

PLEASE NOTE: To operate you need a Webeye approved system from one of our Integration Partners

Once an alarm is triggered the information is sent to the alarm panel or DVR. The alarm notification and/or video is sent via the internet using various means depending on the system you operate.

Once webeyeCMS receives the alarm it goes through unprecedented processes to disseminate the information then notify the alarm recipients. The optional CALIPSA False Alarm Reduction Platform scans the clip to verify human or vehicle activity to send a further confirmation notification.

Notification of an alarm is sent to all recipients simultaneously and virtually immediately. If no one acknowledges the notification webeyeCMS re-sends every 10 minutes for up to 2 hours or until someone confirms receipt.

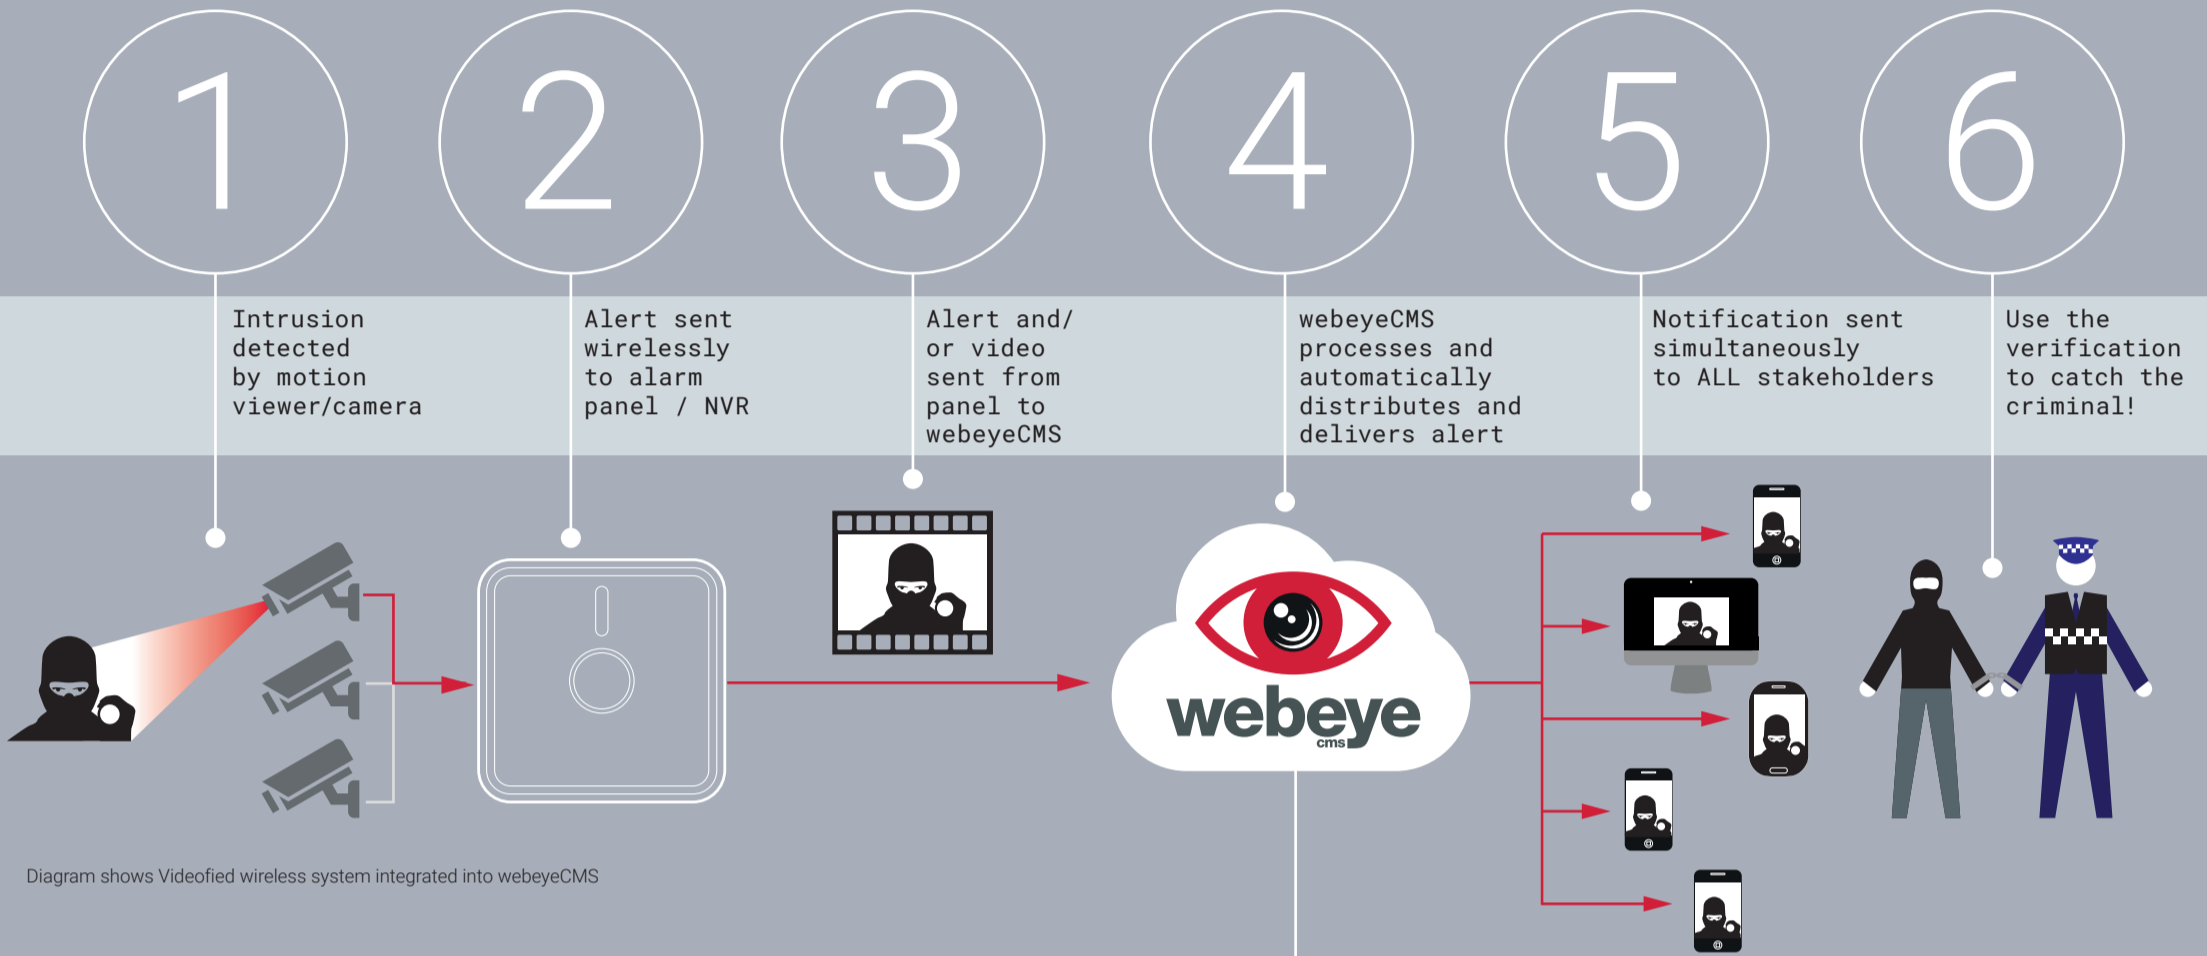

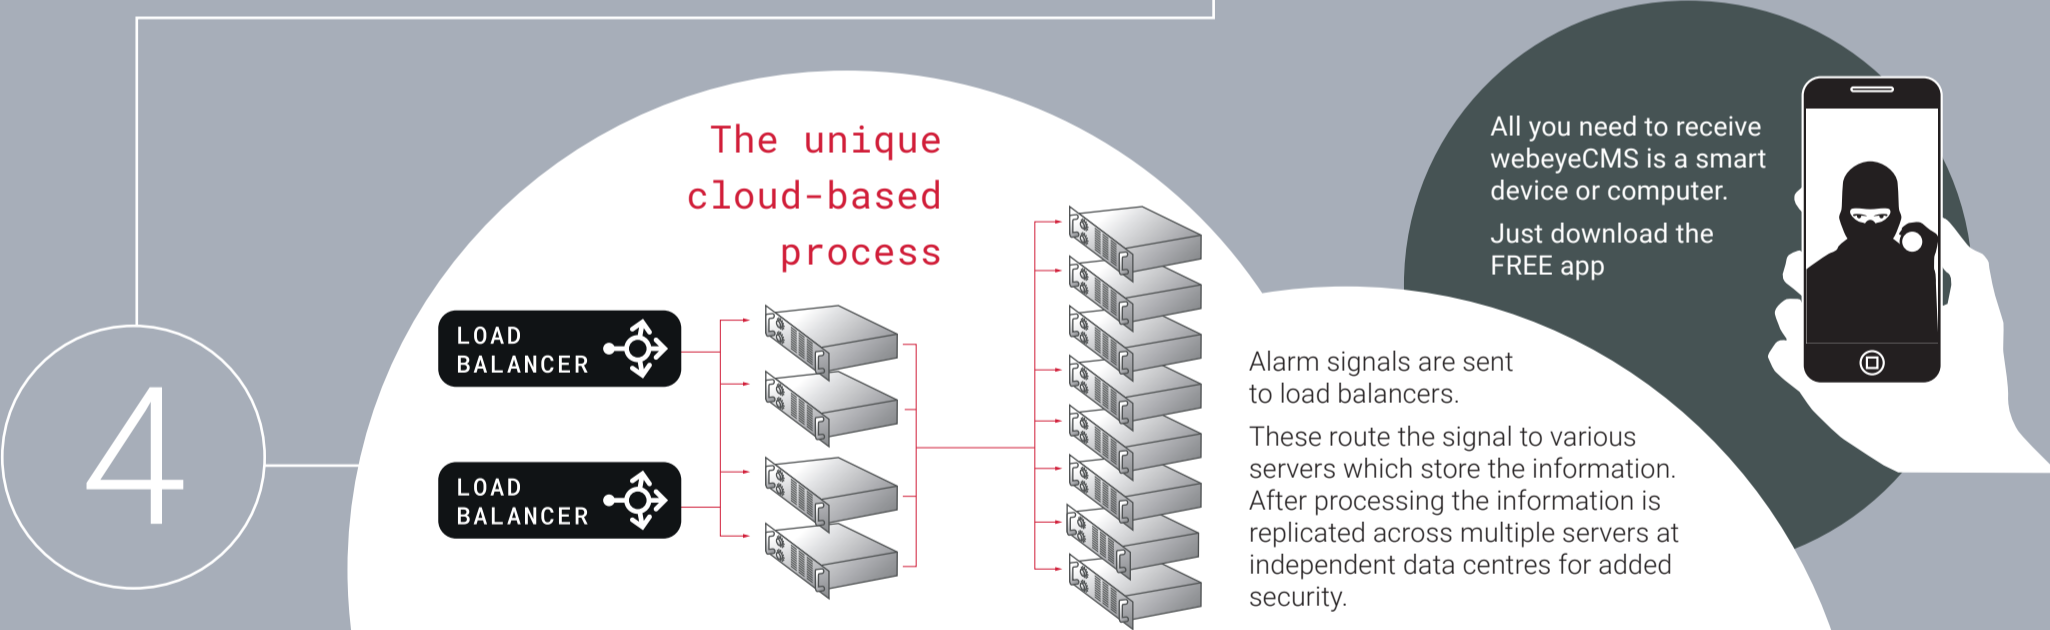

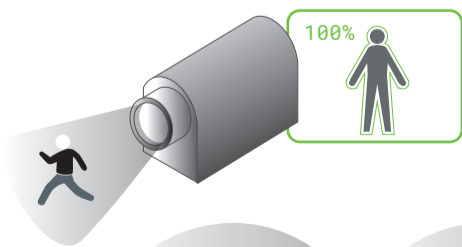

Diagram shows Videofied wireless system integrated into webeyeCMS

Calipsa False Alarm Filtering Platform

Uses A.I to verify human or vehicle activity

- 1 Webeye sends the clip to Calipsa for verification
- 2 Calipsa filters out false alarms caused by non-human or vehicle movement
- 3 Once verified by Calipsa, confirmation will be displayed within Webeye

PADARC

Send and *confirm* technology
NOT send and forget technology

PADARC is the patented delivery technology used in webeyeCMS. It stands for Progressive Alarm Delivery And Response Confirmation. It is unique in the market because we make sure you receive notifications.

- Multiple techniques of alarm delivery used
- webeyeCMS knows when an alarm has been viewed
- Infinitely scalable. This means whether there is 1 recipient or 10,000 they can all receive the alarm notification simultaneously
- Full audit trail. webeyeCMS keeps an accessible record of when and who received the alarm notification
- Will keep trying until you confirm you've received the notification.
